

Magic Music — macOS Release Build Guide

Prerequisites

Make sure you are inside the project folder:

```
cd /path/to/magic-music
```

Activate the virtual environment:

```
source venv/bin/activate
```

Verify:

```
which python
```

Expected:

```
.../magic-music/venv/bin/python
```

1. Build the macOS Application

Clean previous PyInstaller files:

```
rm -rf build dist
```

Build the app:

```
pyinstaller --clean music-player.spec
```

Output:

```
dist/  
└─ Magic Music.app
```

2. Test the Application

Open the app normally:

```
open "dist/Magic Music.app"
```

Debug Mode (View Logs)

If the app behaves incorrectly, run it from Terminal:

```
cd "dist/Magic Music.app/Contents/MacOS"  
./"Magic Music"
```

This shows:

- Python errors
- pygame errors
- Eel errors
- song loading issues

3. Create ZIP Release

Go to the dist folder:

```
cd dist
```

Create ZIP:

```
zip -r MagicMusic-macOS.zip *.app
```

Output:

```
MagicMusic-macOS.zip
```

4. Create DMG Release

From inside `dist`:

```
hdiutil create
  -volname "Magic Music"
  -srcfolder *.app
  -ov
  -format UDZO
  MagicMusic-macOS.dmg
```

Output:

```
MagicMusic-macOS.dmg
```

Final Release Files

Your `dist` folder should contain:

```
dist/
|
├─ Magic Music.app      ← Application
├─ MagicMusic-macOS.zip ← ZIP download
└─ MagicMusic-macOS.dmg ← DMG installer
```

Testing Checklist Before Sharing

App Startup

- ☐ App opens successfully
- ☐ No Dock bouncing / freezing
- ☐ UI loads correctly

Music Features

- ☐ Play works
- ☐ Pause works

- [] Next song works
- [] Previous song works
- [] Auto next song works
- [] Volume works

File Handling

- [] `MagicMusicSongs` folder is created correctly
 - [] MP3 files load correctly
 - [] Invalid MP3 files do not crash the app
-

Common Debug Fixes

Eel Port Already In Use

Error:

```
OSError: [Errno 48] Address already in use
```

Find process:

```
lsof -i :8000
```

Kill process:

```
kill -9 PID
```

Run Clean Build Again

```
rm -rf build dist  
pyinstaller --clean music-player.spec
```
